Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using counter method.

```
Factor(num) {
{
   for (i = 1; i <= num;++i)
   {
    if (num % i== 0)
       {
         printf("%d ", i);
       }
    }
 }
```

Note: No need of counter increment for declarations and scanf() and counter variable printf() statement.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

```c
#include <stdio.h>

int main()
{
    int num,i;
    int count=0;

    scanf("%d",&num);

    for(i=1; i<=num; i++)
    {
        count++;

        if(num%i==0)
        {
            count++;
        }
    }

    count = count + num + 1;

    printf("%d",count);

    return 0;
}
```
